Trees to reply a	o this opinion.	-1! D 4 4 0 00				
When? See the Reply Due date indicated above. However, the Australian Patent Office will not establish the Report before the earlier of (i) a response being filed, or (ii) one month before the Final Date by which the international preliminary examination report must be established. The Report will take into account any response (including amendments) filed before the Report is established. If no response is filed by 1 month before the Final Date, the international preliminary examination report will be established on the basis of this opinion.  Applicants wishing to have the benefit of a further opinion (if needed) before the report is established should ensure that a response is filed at least 3 months before the Final Date by which the international preliminary examination report must be established.						
How? By submitting a written reply, accompanied, where appropriate, by amendments, according to Rule 66.3. For the form and the language of the amendments, see Rules 66.8 and 66.9.						
Also For an additional opportunity to submit amendments, see Rule 66.4.  For the examiner's obligation to consider amendments and/or arguments, see Rule 66.4bts.  For an informal communication with the examiner, see Rule 66.6.						
The FINAL DATE by which the international preliminary report on patentability (Chapter II of the PCT) must be established according to Rule 69.2 is: 27 March 2006

#### NOVELTY (N) and INVENTIVE STEP (IS) claims 1-35

Claims 1-18 and 35: These claims lack inventive step in light of D1, D2, D3 and D5. The invention of claim 1 is distinguished from each of these documents only by its use of an anonymisation code to replace each item of patient sensitive information. (All the identified citations discloses the anonymisation of patient data in some form.) While you have argued that this difference constitutes an inventive step because "the feature is not a well known aspect of PACS and MIRC servers," and that "sensitive information is usually encrypted as a whole," I find this argument to be unpersuasive. The use of anonymisation codes cannot be seen to be inventive, since it merely replaces the sensitive data with a random code by which an authorised person may retrieve the sensitive data. Techniques such as this are commonplace in the larger arena of database design, and a person skilled in the art would readily access this knowledge when implementing any of the cited systems. As previously discussed, in the cited art.

### WRITTEN OPINION OF THE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

International application No.

PCT/SG2004/000382

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claim 19 is not fully supported by the description, since it defines no working inter-relationship between the integers of the claim.

In claim 22, there is not antecedent to "the image server."

Form PCT/IPEA/408 (Box No. VIII) (April 2005)

70100 . 655-747-541 LVY 020202020.

### WRITTEN OPINION OF THE TO WE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

International Application No.

PCT/SG2004/000382

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of: Box V, item 2

Claims 19-34: These claims still lack novelty and/or inventive step in comparison to document D1, which discloses a database (the directory structure containing the teaching files; the "DICOM Store"), an image retrieval interface ("DICOM Q/R Tab"), a MIRC server ("Export Site") and a graphical user interface (screenshots).

Claim 19, at least: This claim is still seen to lack novelty in comparison to D7, which discloses a database ("neurological disease databases"), an image retrieval interface ("Picture Archive and Communications System"), a MIRC server ("MIRC;" the presence of a server is implicit) and a graphic user interface (Windows or other OS on which the system runs).

Claims 19-34: Each of D2, D3 and D5, when combined with D8, discloses all the essential features of the claimed invention. A skilled addressee would readily make the above combinations, since the MIRC schema described in D8 is aimed at standardising systems of the type described in D2-D6. The first group of documents discloses an image retrieval interface (PACS) and personal database for images of various formats, and a graphical user interface; D8 discloses a MIRC server.
